Hello Spotify,

As a budding software engineer, I believe that the best place for me to grow is a company that can offer me robust resources, but at the same time give me the freedom to work on important projects that will make an impact in the real world. For this reason, I believe that Spotify is the perfect fit. I know that Spotify engineers work on very complex problems, and I would love to tackle these challenges with some of the brightest people by my side.

As for my qualifications, my resume does a good job of telling the whole story. I am experienced with Java and Python, and I am very comfortable with working on large-scale projects. With my solid foundation, I can pick up anything new very quickly. I have no doubt that I can successfully complete any project you throw at me. I am also very detail-oriented, always thoroughly testing my code and making sure everything is under version control. Furthermore, I have a lot of leadership experience. Asides from what is listed on my resume, I represented Scouts Canada as 1 of 10 Spokespeople for the 10,000-strong organization. I also worked in a 10-people team to launch an entrepreneurship venture. I am very proficient in resolving teamwork issues and communicating effectively.

Apart from academics, I enjoy all kinds of outdoor activities, many sports, watching new movies, and attending concerts. I am very sociable, and I love to meet new people. In addition to contributing to your company with my engineering skills, I will also help foster an energetic atmosphere where amazing people are doing amazing things while having lots of fun.

To reiterate, I am confident that my combination of solid technical ability and intangible skills will be invaluable to your company. Spotify would be an amazing place to work over the summer, and I can't wait to hear back from you.

Thanks,
Michael Deng
